

# Using Wearable Technology to Develop Creative Players

## Situation Awareness Technology System (SATS)

### What is SATS?

Wearable technology worn on the head and trunk

Integration of inertial sensor and positioning system technologies

### What does SATS measure?

Scanning behaviour during training and games

- Head orientation, scanning frequency, scanning size, etc.
- Trunk orientation, pitch location, player spacing, player actions, etc.

### How SATS can transform coaching

Scanning improves performance with the ball

Coaches can understand players' situation awareness and decision making

Coaches can modify training to develop more creative players
